DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A, Claims 1-19 directed towards a MEMs variable optical attenuator comprising at least one semi-transparent refraction-mode shutter not claimed in the other species.

Species B, Claims 20-25 directed towards a variable optical attenuator comprising a transparent silicon shutter having two non-parallel sidewalls not claimed in the other species.

Species C, Claim 26 directed towards a MEMs variable optical attenuator characterized by a switching time comprising at least one damper connected to one shutter and used for shortening the VOA switching time not claimed in the other species.

Species D, Claim 27 directed towards a variable optical attenuator comprising a locking mechanism for locking the shutter in an actuated position not claimed in the other species.

Species E, Claims 28 - 29 directed towards an integrated variable optical attenuator and 2 x 2 optical switch component comprising a MEMs element operative to perform both switching and variable optical attenuation not claimed in the other species.

Species F, Claims 30-32 directed towards a MEMs variable optical attenuator comprising a folded suspension having a plurality of springs not claimed in the other species.

Species G, Claims 33-38 directed towards a MEMs variable optical attenuator comprising at least one side electrode interacting electrostatically the frame not claimed in the other species.

Species H, Claims 39-40 directed towards a variable optical attenuator comprising a high resolution radial-to-linear actuator having at least one pre-curved spring connected to a shutter not claimed in the other species.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Art Unit: 2883

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
